Interim report for worker 2017-12-infrastructure 15.01.2018

•

https://github.com/blockchainprojects/2017-12-infrastructure/blob/master/Roadmap\_2017-12-infrastructure.pdf

#### Milestones Deliverables:

Roadmap

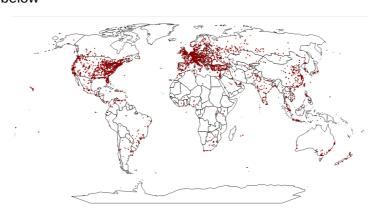

Integrate and deploy faucet
 Details of the onboarding account

https://wallet.bitshares.org/#/account/committee-account/permissions

Details of the newly created accounts

https://bitshares.eu/referral/onboarding/onboarding.bitshares.foundation

As of now 19760 accounts were created with 85 life time upgrades, distributed as indicated below

Initially the faucet was funded by the worker with 25,000 BTS. Right now there are 6774 BTS left with 37,062 BTS already accumulated through fees

https://wallet.bitshares.org/#/account/onboarding.bitshares.foundation/vesting

#### 2. Develop docker containers

A docker-compatible deployment has been developed and integrated into BitShares-core. This feature will be available with the next release (which will be a non-hardfork release as per the core developers). We further added integration into docker-hub which automatically builds docker-containers with every tag produced on the bitshares-core repository.

https://cloud.docker.com/app/bitshares

#### 3. Develop orchestration tooling

Automated deployment tools are setup with ansible. We have made significant progress on the orchestration tooling which comes with the following stack of software:

- \* bitshares-docker
- \* bitshares-healthchecker
- \* haproxy
- \* certbot/letsencrypt
- \* munin monitoring
- \* nagios monitoring

#### 4. Develop loadbalancer

Loadbalancing and monitoring is realized with HAproxy, munin. BitShares blockchain health-checker is also included. Statistics will be available later

#### 5. Test deployment and loadbalanced nodes

First loadbalanced node is setup in germany and available under

https://eu.nodes.bitshares.works

### Interim report

Progress is going well and according to the time plan. So far, no bills have been send to the BBF.

Right now, we are looking for internal accounting and finance to give a go for ordering the first machines for real-environment staging deployment. In the mean time we have made our inhouse test publicly available for convenience (see milestone 5). For that purpose we have obtained the bitshares works domain.

The new deployed node for our inhouse test is fully operational and can be utilized e.g. in the online wallet by adding the node manually. Go to Settings -> Access -> Available Nodes -> Add Node and enter

Name: BitShares Infrastructure EU Address: wss://eu.nodes.bitshares.works

# **Updated Timeline**

2017-12-infrastructure				2017				2018
